

eCONTROL Center™

Electrical Equipment Building

The eCONTROL Center™ is engineered and built from the floor up in a controlled manufacturing environment and simplifies your electrical equipment installation.

The eCONTROL Center™ is a UL listed electrical building with the following installed and wired:

- **Medium/Low Voltage Switchboards**
- **MCCs, Softstarts and VFDs**
- **PLC and Control System Network**

ESP has simplified and reduced the cost of integrating all of these major electrical equipment

components. Instead of managing multiple vendors to deliver a completed electrical building you now have only one.

The manufacturing environment tightly controls the quality of the materials and insures standardization of all components.

- **Standard width is 10'3" for the extra space. Custom sizes available**
- **Pre-Wired and Pre-Commissioned**
- **Reduced On-Site Commissioning and Startup Cost**

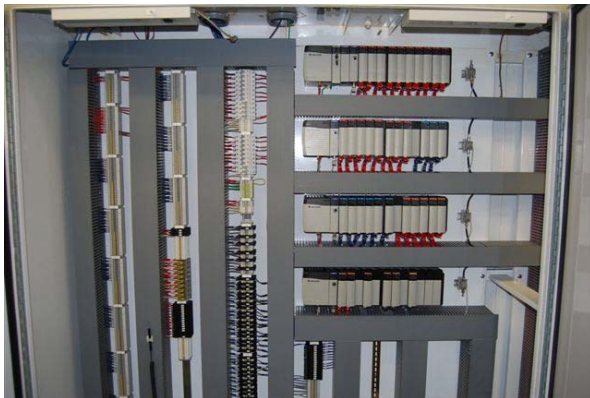

eCONTROL Center™

Electrical Equipment Building

Standard Features:

Interior

- 5 ton HVAC w/ heat strips
- Smooth Steel Flooring
- Flush Floor Chase Covers
- Di-Electric Mat full length
- 3 Phase 480 VAC Panelboard
- Transformer w/ 150A 240/120V Panelboard
- Ethernet Fiber Patch Panels and CAT 5 Networking
- Lights/Receptacles and Fire Extinguisher
- All Electrical Gear Grounded to Copper Bus Bar

Exterior

- White Exterior Aluminum Skins or Galvanized Metal
- (2) Access Doors – One Oversized for Equipment Removal
- R11 Insulation (Floors, walls, ceiling)
- Outside Lights and Receptacles
- Top/Bottom Lift Design
